Newsletter Agent — Components Map

Weekly flow of the Indian-startup newsletter agent · read left to right, then down the Output column · one arrow = one hand-off

Actor	Trigger	Input	Context	Processing	AI	Output
VERCEL CRON (Scheduler)	1 · TRIGGER Cron fires with no human: Mon–Wed to collect, Wed 2:30 PM to select.					
GEMINI FLASH (AI)					5 · SELECT + WRITE (AI) Gemini picks 8–10 stories + backups (high signal, 3+ topics, none in last 4 issues) and drafts 2–3 lines each in Shreya's voice.	
BACKEND (Next.js · code)		2 · INPUT Pulls 20+ RSS feeds + GNews queries. Stores every article in Neon (title, URL, date, source).		4 · PROCESS (code) Dedupes by URL + title match within the week; drops anything in the last 4 issues. Marks new or seen.		6 · OUTPUT (draft) Code checks the pick (count, 3+ topics, no repeats), re-asks Gemini if it fails. Saves draft, sends to Telegram Wed 6 PM.
NEON POSTGRES (Database)			3 · CONTEXT Feeds steps 4 + 5. Returns last 4 issues, this week's articles + style guide (seeded with sample data).			
REVIEW GATE (Shreya · Telegram)						7 · DECIDE (human) Shreya keeps, edits or swaps each story, then confirms. No confirm by 10 PM → reminder.
SEND GATE (Code · approval check)						8 · GATE (code) Thu 8 AM: passes only if status = confirmed and text unchanged since. Else holds + alerts her.
RESEND (Email)						9 · OUTPUT (send) Builds HTML email with unsubscribe link, sends (demo: own inbox). Resend bounce webhook + unsubscribes update the Neon list.
Problems covered	P12	P1 · P2 (store)	P11	P2	P3 · P4	P3 · P5 · P6 · P7 · P8 · P9 · P10

Legend: Trigger | Input | Context / DB | Code step | AI step | Human step | Output

Only six column headers are used (Trigger, Input, Context, Processing, AI, Output). Everything after the AI is a stacked chain in the Output column: draft → Shreya decides → code gate → send.

Loops not drawn, to keep one arrow per step: Swap on Telegram pulls a backup story from the bench (commentary already written in step 5). Any edit after confirming sends the draft back to step 7.

Public URL hosts the status dashboard, the unsubscribe page and the Resend webhook endpoint; these sit outside the weekly flow. The Wed 6 PM, Wed 10 PM and Thu 8 AM triggers are further cron calls from the same scheduler.

How to edit: cut/paste a box into the right actor row and stage column, then drag the arrow ends. Arrows are shapes, so they do not move with cells. The 'Examiner review' tab re-checks placement live.
